Write a program which creates two threads, one thread displaying "BMS College of Engineering" once every ten seconds and another displaying "CSE" once every two seconds.

```
=> class BMScollegeThread extends Thread {
    public void run() {
        try {
            while (true) {
                System.out.println("BMS college of
                Engineering");
                Thread.sleep(10000);
            }
        } catch (InterruptedException e) {
            System.out.println("Thread Interrupted: " + e.getMessage());
        }
    }
}
```

```
class CSEThread extends Thread {
    public void run() {
        try {
            while (true) {
                System.out.println("CSE");
                Thread.sleep(2000);
            }
        } catch (InterruptedException e) {
            System.out.println("Thread Interrupted: " + e.getMessage());
        }
    }
}
```

```

public class MultiThreadExample {
    public static void main (String [] args) {
        BMScollegeThread bmsThread = new
            BMScollegeThread();
        CSEThread cseThread = new CSEThread();
        bmsThread.start();
        cseThread.start();
    }
}

```
